ANNUAL REPORT ON VITAL STATISTICS, 1921.

INTRODUCTORY.

COMPILATION OF VITAL STATISTICS.

In New Zealand births and deaths are registered in duplicate, one entry being made in the register of the Local Registrar and the other on a loose sheet, the latter being transmitted quarterly to the Registrar-General at Wellington, who keeps the Dominion Register. For the compilation of statistics the essential particulars are transferred to a card by the Registrars in the fifteen urban areas, and in other cases by officers of the Census and Statistics Office who visit the Registrar-General's Office quarterly for this purpose. The statistics are compiled annually in the Census and Statistics Office, monthly statements for the urban areas also being compiled from the information on the statistical cards furnished at the end of each month by the Registrars concerned.

In the case of marriages, a copy of each entry in the register of the officiating minister or Registrar is sent quarterly to Wellington, where statistical cards are written for all marriages, and annual statistical tables compiled.

The hospital statistics are compiled in the Census and Statistics Office from returns supplied quarterly by Medical Superintendents of public hospitals throughout the Dominion. An individual card is supplied for each patient discharged or dying during the quarter, and a summary showing numbers and sexes of admissions, discharges, and deaths, and patients remaining at the end of the quarter is also furnished.

For the compilation of the statistics of benevolent and orphan asylums a return is obtained annually from each institution, giving a summary of admissions, discharges, &c., and the ages and sexes of all inmates who were in the institution at any time during the year.

The figures of births, deaths, and marriages quoted in these introductory notes or contained in the tables are in all cases exclusive of Maoris. The hospital and benevolent and orphan asylum statistics, however, cover Maoris also.

BIRTHS.

NUMBER AND RATE.

During the year 1921 the births of 28,567 children born alive were registered, representing a rate of 23.34 per 1,000 of mean population. The number is the second-highest ever recorded in the Dominion, having been exceeded only in 1920, when 29,921 births were registered. The rate, however, is exceedingly low—lower, indeed, than in any previous year with the solitary exception of 1919, the rate for which was, of course, very seriously affected by the absence of men at the war, as well as to a certain extent by the disastrous influenza epidemic of 1918–19. With the record number of marriages in 1920 a much higher birth-rate in 1921 than that recorded might confidently have been anticipated, but economic and social conditions have evidently had their affect on the rate.

SEXES OF CHILDREN BORN.

Of the infants whose births were registered in 1921 14,576 were males and 13,991 females, the number of males per 1,000 females being 1,042, as compared with an average of 1,053 for the preceding ten years. The proportions for the various provincial districts in 1921 ranged from 954 males per 1,000 females in the case of Taranaki to 1,114 per 1,000 in Hawke's Bay.

In the case of first-born legitimate children whose births were registered during the year, the number of male births per 1,000 females—viz., 1,076—was much higher than for the average of all births. Among illegitimate children, however (nearly all of whom would be first-born infants), the proportion was only 1,036 males per 1,000 females.

An interesting discussion on the question of sexes of children is given in the 1921–22 number of the "New Zealand Official Year-book."

MULTIPLE BIRTHS.

Counting only cases where both children were born alive, there were 347 cases of twin births (694 children) in 1921. In addition there were 5 cases of triplets.

The total number of children born alive was 28,567, and the number of mothers of living children was 28,200. Thus one mother in every 80 gave birth to twins (or triplets), as compared with 81 in 1920 and 89 in 1919.

In 125 cases of plural births in 1921 both children were males, and in 90 both females, the children being of opposite sex in the remaining 132 cases. In 4 of the 5 cases of triplets two females and one male were recorded, all three children being males in the other case.

ILLEGITIMATE BIRTHS.

The births of 1,258 children (640 males and 618 females) registered in 1921 were illegitimate, 44 in every 1,000 children registered being thus born out of wedlock, a proportion somewhat lower than in 1920 (1 in 48). The total mentioned includes 95 children whose births had not previously been registered as illegitimate, but who were legitimated under the authority of the Legitimation Act. Seventy-four births previously registered as illegitimate and re-registered under the Legitimation Act are not included.

STILL-BIRTHS.

Still-births registered in 1921 totalled 903, the sex being male in 493 cases, female in 402, and not stated in 8. The total includes 47 illegitimate cases. In 7 cases both of twins were still-born, and in 1 case two of triplets, while in 20 other cases where plural births would normally have been recorded one child was born alive and the other still-born.

MARRIAGES.

NUMBER AND RATE.

During the year 1921 10,635 marriages were solemnized, corresponding to a rate of 8.69 per 1,000 of mean population. The number of marriages for the year is 1,540 less than in 1920, but is nevertheless higher than in any previous year. The rate for 1921, though much below that of 1920, is somewhat higher than the average for the decade immediately preceding the war.

The high number and rate for 1920 was due to the return of men from the war, coupled with the prosperity of the country. A glance at the quarterly figures for 1920 and 1921 shows that, in sympathy with economic conditions, marriages continued at a high figure until about Easter of 1921, and then fell away. The quarterly figures are as follows:—

				1920.	1921.
Quarter ended	31st March	2,981	2,872
"	30th June	3,329	2,849
"	30th September	2,843	2,330
"	31st December	3,022	2,584

Statistics covering a period of years show that, except when Easter falls in March, June quarter has normally the highest number of marriages, followed by December, March, and September quarters, in that order.

CONDITION OF CONTRACTING PARTIES.

Of the total of 10,635 marriages recorded in 1921, in exactly 9,000 cases neither party had previously been married. This represents a percentage of 85, as compared with a corresponding percentage of 90 in 1914. Out of every 1,000 persons married in 1914, 11 were described in the register as divorced and 51 as widowed, the corresponding figures for 1921 being 24 and 67 respectively. The increase in the one case is a reflex of the large increase in divorce since the war, while as regards remarriages of widowed persons the obvious explanation lies in the war and the influenza epidemic. The figures for 1921, in common with those of previous years, show that in the case of divorced persons women are more likely to remarry than men, while in the case of widowers and widows the converse holds.

Included among the widows in 1921 were 16 women, and among the widowers 7 men, who remarried under the protection of the provisions of section 224, subsection (5), of the Crimes Act, which reads: "No one commits bigamy by going through a form of marriage if he or she has been continually absent from his wife or her husband for seven years then last past, and is not proved to have known that his wife or her husband was alive at any time during those seven years."

AGES OF PERSONS MARRIED.

Of the persons married in 1921 319 bridegrooms (or 3 per cent. of all grooms) and 1,684 brides (16 per cent.) were under 21 years of age. Of the bridegrooms two were between 16 and 17, 7 between 17 and 18, and 28 between 18 and 19, while of the brides nine had not attained their sixteenth birthday and 49 were between 16 and 17 years of age.

At the other end of the list 664 bridegrooms and 329 brides were over 45 years of age, these figures representing 6 per cent. and 3 per cent. respectively of the totals. Sixty per cent. of the bridegrooms and 78 per cent. of the brides were under 30 years of age.

Dealing with individual ages it is found that age 24 held pride of place with bridegrooms and age 21 with brides. The latter has remained unaltered for many years, but in the case of bridegrooms what may be termed the most popular age has varied considerably during recent years. For several years prior to 1918 it was 26, but in that year age 28 was to the fore, followed

by a return to 26 and 27 (equal) in 1919. In 1920 it fell to 25, and in 1921, as before stated, to 24, a state of affairs which had not previously occurred since statistics of individual ages of bridegrooms and brides were instituted in 1902.

The average age at marriage in 1921 was 30.69 for bridegrooms and 26.72 for brides, the median age being—grooms 28, brides 24.

MARRIAGES BY MINISTERS OF VARIOUS DENOMINATIONS.

Of the 10,625 marriages registered in 1921, Church of England clergymen officiated at 3,039 (28.58 per cent.), Presbyterians at 2,765 (26.00 per cent.), Methodists at 1,148 (10.97 per cent.), and Roman Catholics at 1,202 (11.30 per cent.). The only other religious denominations whose ministers officiated at more than 100 marriages during the year were the Baptists (210) and the Congregational Independents (142). Ministers of the Church of Christ solemnized 94 marriages, and officers of the Salvation Army 68.

Civil marriages numbered 1,887, or 17.74 per cent. of the total. The percentage of civil marriages is considerably lower than in any of the war years, and slightly lower than in late pre-war years, but somewhat higher than in 1920.

DEATHS.

NUMBER AND RATE.

The number of deaths registered during 1921 (10,682) is the third-highest ever recorded in New Zealand, having been exceeded only in 1918 (the epidemic year) and 1920. The rate, 8.73 per 1,000 of mean population, is, however, remarkably low, constituting indeed a new record, the previous lowest rate being that for 1912 (8.87). By comparison with 1920 the figures for 1921 show a decided improvement, the number of deaths having decreased by 1,427 in spite of the greater numbers at risk, and the rate per 1,000 having been reduced from 10.15 to 8.73. The numbers of deaths in each quarter of the two years are as follows:—

				1920.	1921.
Quarter ended	31st March	2,466	2,480
"	30th June	2,923	2,528
"	30th September	3,600	3,094
"	31st December	3,120	2,580
Totals ..				12,109	10,682

The improvement in 1921 is common to all quarters with the exception of the first. The third quarter of the year almost invariably ranks higher in point of number, on account of the toll that the winter months take of people in advanced ages.

SEXES OF PERSONS DYING.

Not only does the male population of the Dominion exceed the female, but the death-rate of males is normally higher than that of females. Hence the number of deaths of males is considerably in excess of those of females. In 1921 the deaths of males numbered 6,099, as against only 4,583 in the case of females, the male rate being 9.75 per 1,000 and the female 7.66.

For every 100 deaths of females registered during the year there were 133 of males, and the death-rate of males was 27 per cent. higher than that of females.

AGES AT DEATH.

Deaths during 1921 at each year of age are shown in the table on page 17, and for convenience are here given in quinquennial age-groups, the two sexes being shown separately.

Age-group.			Males.	Females.	Total.	Age-group.			Males.	Females.	Total.
Under 5	1,020	815	1,835	60 and under 65	422	250	672
5 and under	10	..	138	96	234	65 " 70	523	317	840
10 " 15	101	68	169	70 " 75	496	368	864
15 " 20	98	96	194	75 " 80	509	412	921
20 " 25	153	144	297	80 " 85	412	299	711
25 " 30	137	173	310	85 " 90	275	183	458
30 " 35	191	156	347	90 " 95	75	71	146
35 " 40	260	210	470	95 " 100	18	15	33
40 " 45	275	191	466	100 and over	1	2	3
45 " 50	337	211	548						
50 " 55	315	257	572						
55 " 60	343	249	592						
						Totals	6,099	4,583	10,682

A preponderance of males occurs at all age-groups with the exception of the negligible group "over 100" and the group "25 and under 30," a period at which the effects of child-bearing are felt in the female numbers. The two preceding groups show a very slight excess of males, the

greatest excess occurring at age 60 and over, in sympathy with the greater disparity between the numbers of male and female population at those ages.

The tables on pages 18 and 19 are very interesting, and are worthy of close inspection. Both give practically identical results, and attention may be confined to the first, which shows the number of deaths of males at the various age-groups in each year from 1872 to date. The total male deaths in 1921 were three and one-third times greater than in 1872, but the deaths under one year of age increased by only one-fourth in the forty-nine years; indeed, if the comparison be made between 1875 and 1921 an actual decrease of one-fourth is recorded. Between these two years the annual number of births doubled itself, and the decrease in the deaths under one year is an eloquent tribute to the efficacy of the steps taken to preserve infant-life.

Turning now to the age-group "80 years and over" at the other side of the table, a remarkable difference between the earlier and later years covered by the figures is apparent. In 1872 deaths of males at ages 80 and over numbered only 17 or less than 1 per cent. of the total of 1,844, while in 1921 781 male deaths over 80 years of age were recorded, this number representing 13 per cent. of the total male deaths in that year. In 1900 the corresponding percentage was slightly under 6. The figures are a reflex of the changes in the age-constitution of the population, combined with the great improvement in the death-rate at the earlier ages.

Similar though less pronounced changes have occurred in the age-groups between 60 and 80 years, while the groups up to age 40 show results opposite to these.

Even the "Unspecified" column is not without interest, the rapid decrease in the number appearing under this head in successive years being evidence of the increasing care taken to secure proper records, as well as of the spread of settlement and the improvement in means of communication. The large numbers of unspecified ages in 1894 and 1903 are grim reminders of the wrecks of the "Wairarapa" and "Elingamite" in the respective years.

Returning now to the figures for 1921, it is found that the median age at death was 55 in the case of males and 52 for females. The average ages at death for the two sexes were 48.45 years and 46.97 years respectively. As regards individual ages after the first year, age 70 was the highest in point of numbers for males, age 78 for females, and age 70 for the two sexes taken in conjunction.

INFANTILE MORTALITY.

The year 1921 saw a continuation of the low rates of infantile mortality which have been experienced during recent years. Deaths of infants under one year of age in 1921 numbered 1,366, and represented a rate of only 4.78 per 100 births, a rate lower than in any preceding year with the exception of 1919, when it stood at 4.53.

The rate is invariably higher for male infants than for females, the figures for 1921 being 5.31 and 4.23 respectively. There is an even greater disparity in the actual numbers for the two sexes (774 males, 592 females) owing to the greater number of male children born.

Sixty-four per cent. of the infantile deaths in 1921 occurred within the first month of life. The figures for four divisions of the year are as follows:—

Age.	Numbers.			Rate per 1,000 Births.		
	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.
Under 1 month	484	392	876	33.21	28.02	30.66
1 month and under 3 months ..	119	76	195	8.16	5.43	6.83
3 months and under 6 months ..	83	54	137	5.69	3.86	4.80
6 months and under 12 months ..	88	70	158	6.04	5.00	5.53
Totals	774	592	1,366	53.10	42.31	47.82

The great improvement which has taken place in the infantile-death rate is all the more remarkable when it is considered that the position as regards the first month of life has remained much the same since the "seventies." The rate for 1921 for the first month of life (30.66 per 1,000 births) is indeed slightly higher than the corresponding figure for the period 1881-85 (29.77). On the other hand, the rate of deaths among infants who survive the first month has fallen from 62.70 per 1,000 in 1881-85 to only 17.63 per 1,000 in 1921. A large percentage of the deaths during the first month are due to pre-natal factors.

Analysing the first month into shorter periods, it is found that of the total of 876 deaths no fewer than 259 occurred within the first twenty-four hours, a further 126 on the second day, and 276 more within the next five days, making 661 (or 75 per cent. of the total) for the first week of life.

The most frequent cause of death among infants is premature birth, 403 deaths being attributed to this cause in 1921. Other principal causes are congenital debility (191), congenital malformations (143), and the class "other causes peculiar to early infancy" (151), which covers injuries at birth. Of post-natal diseases bronchitis, broncho-pneumonia, and pneumonia caused 137 deaths in 1921, and diarrhoea and enteritis 110.

Of the 1,366 infants who died in 1921 before completion of the first year of life, 118, or 8.64 per cent., were illegitimate. This percentage is almost double that of illegitimate births to total births (4.40).

CAUSES OF DEATH.

Full details of causes of death during the year 1921 are contained in the tables on pages 21 to 47. For purposes of comparison a summary of numbers and rates for the principal causes during the last five years is here given:—

Cause.	Number of Deaths.					Proportion per 10,000 of Mean Population.				
	1917.	1918.	1919.	1920.	1921.	1917.	1918.	1919.	1920.	1921.

A comparison of the figures for 1921 with those for 1920 shows that the decrease has not been spread altogether uniformly over the various diseases. Noteworthy decreases are recorded in the cases of influenza, 385; senility, 226; heart-disease, 191; bronchitis, 101; pneumonia, 101; measles, 75; congenital debility, 72; whooping-cough, 58; and pulmonary tuberculosis, 55. On the other hand, the following causes show increases in 1921 over 1920: Diarrhœa and enteritis, 33; suicide, 24; nephritis, 21; diabetes, 16; cancer, 15; anæmia, chlorosis, 14; violence (excluding suicide), 14; scarlet fever, 9; diphtheria, 8; infantile paralysis, 7; infantile convulsions, 6; tuberculosis, other than pulmonary, 3.

Dealing now with the 1921 figures for the principal causes of death, the following remarks may be of interest.

Typhoid Fever.—Sixteen males and 8 females, all between the ages of 5 and 60, died of this disease during the year. Sixteen of the deaths occurred in the Auckland Provincial District.

Measles.—The 47 deaths due to this cause were almost equally divided between the two sexes (males 23, females 24), and with 10 exceptions were confined to children under ten years of age. Thirty of the deaths were in Auckland Provincial District.

Scarlet Fever.—Deaths from this disease were more evenly spread over the Dominion. Scarlet fever was one of the two epidemic diseases which showed slight increases over 1920, all other epidemic diseases showing substantial decreases.

Whooping-cough.—The 49 deaths from whooping-cough in 1921 compare favourably with the total for 1920 (107), but are considerably in excess of those for the three preceding years. Twenty-six of the deaths from this cause in 1921 occurred in Auckland Province.

Diphtheria.—In common with measles, diphtheria shows an increase in 1921 over 1920. Thirty-two of the 103 deaths occurred in Auckland Province, and 28 in Canterbury. Male deaths numbered 47, and female 56.

Influenza.—The decrease in this case is particularly gratifying. The epidemic of 1918 was short-lived, but, judging by the figures for 1919 and 1920, the disease still remained and caused many deaths. Even the total of 105 deaths from influenza in 1921 is 50 per cent. higher than in the average of the ten years 1908–1917, but was exceeded in 1910 and 1915. The deaths in 1921 were fairly evenly distributed over the Dominion.

Pulmonary Tuberculosis.—In this case also the decrease in 1921 is a matter for favourable comment. The steady fall in the rate which had been experienced for many years prior to 1916 appeared to have received a check in that and following years; but the rate for 1921 (5·23) has only once been bettered—viz., in 1915 (5·11). Males contributed 337 deaths and females 303.

Other Forms of Tuberculosis.—Three more deaths were recorded under this head in 1921 than in 1920. Tuberculous meningitis was the cause of death in 67 cases, abdominal tuberculosis in 26, tuberculosis of spine in 14, and disseminated tuberculosis in 24. Of those who died from tuberculous meningitis, 12 were under one year of age and 34 under five years.

Cancer.—In point of numbers the deaths from cancer in 1921 were the highest on record, but the rate shows a further slight continuation of the fall experienced in 1920. The figures for the five years 1917–21 would appear to indicate at least a temporary stoppage in the upward trend of the cancer death-rate. The 1921 figures for each of the seven classes into which cancer is divided on a location basis are as follows :—

Location.							Males.	Females.	Total.
Buccal cavity	48	8	56
Stomach and liver	227	145	372
Peritoneum, intestines, and rectum	91	100	191
Female genital organs	90	90
Breast	86	86
Skin	13	7	20
Other or unspecified organs	144	85	229
Totals	523	521	1,044

The female death-rate is somewhat higher than the male; but excluding the two classes peculiar to women, a pronounced male excess is apparent. This is particularly the case in regard to cancer of the buccal cavity, 48 male deaths being due to this cause in 1921, as against only 8 females.

Diabetes.—The number and rate in 1921, though higher than in 1920, compare favourably with the figures for 1918 and 1919. Deaths of females from diabetes considerably outnumber those of males.

Exophthalmic Goitre.—Of 38 deaths from this cause in 1921 only 6 were of males. Twenty-eight of the 32 females who died during the year were between the ages of 30 and 60.

Anæmia, Chlorosis.—In this case also the female deaths exceeded the male, with totals of 55 and 42 respectively. Little movement is shown in the figures for this disease between one year and another.

Meningitis.—The deaths in 1921 were lower than for many years previously. Male deaths numbered 76 and female 38. Forty-six of the deaths were of children under five years of age.

Infantile Paralysis.—This disease is included among the principal diseases, owing to the large number of deaths due to it in 1916 (123). Only 9 deaths from infantile paralysis were recorded in 1921.

Apoplexy, Cerebral Hæmorrhage.—Little variation between one year and another is shown for deaths from this cause, which are practically confined to persons over 45 years of age. It is noteworthy, however, that more female than male deaths were recorded in 1921, the totals being 268 and 246 respectively.

Infantile Convulsions.—Here again little variation occurs in the annual numbers. Of the 70 children under five years of age who died from convulsions in 1921, 41 were males.

Organic Heart-disease.—The fall of 1919 between the figures for 1920 and 1921 is evidently an indication of more favourable conditions experienced in the latter year as regards persons at the later age-periods (who contribute the great majority of deaths from this cause), and not of any decrease in the incidence of heart-disease. A similar though more pronounced result is seen in the case of deaths from senility.

Arterio-sclerosis.—In common with other circulatory diseases, arterio-sclerosis shows much more favourable results in 1921 than in 1920. Male deaths numbered 49 and female 34.

Embolism, Thrombosis.—Of the 80 deaths from this cause in 1921, 50 were of females, this number not including deaths from puerperal embolism or thrombosis.

Bronchitis.—All respiratory diseases show considerable decreases in 1921 as compared with 1920. Deaths from bronchitis numbered only 288, as against 389 in 1920. Acute bronchitis was the cause in 101 cases, and the chronic form of the disease in 187 cases. Male death were 167 and female 121.

Broncho-pneumonia.—The 194 deaths from broncho-pneumonia in 1921 represents a decrease of 37 on the previous year's figure. Children under five years of age contributed 104 of the total of 194 deaths.

Pneumonia.—Of 427 persons who died from pneumonia in 1921, 299 were males and only 128 females. Sixty-five children under five years of age are included in the total.

Gastritis.—The number of deaths from gastritis in 1921 (22) is the lowest for many years past. Fifteen of the deaths were of females.

Diarrhoea and Enteritis.—The number of deaths under this heading in 1921 (221) is somewhat above the average of recent years. Children under two years of age contributed 142 of the deaths.

Appendicitis.—Deaths from appendicitis show little movement in recent years, such movement as there is having a downward tendency. The rate for 1921 (0.70 per 10,000) is the lowest for several years.

Hernia, Intestinal Obstruction.—Deaths under this heading in 1921 include—hernia, 11; intestinal obstruction, 51 (including 31 females); intussusception, 12; and volvulus, 5. The total of 79 is much smaller than that for 1920 (127).

Cirrhosis of Liver.—Comparatively few deaths occur from this cause, which nevertheless ranks among the principal diseases on account of its fatal nature. Of 28 deaths from this cause in 1921, 19 were of males.

Peritonitis.—Forty persons (18 males and 22 females) died from peritonitis, so defined, in 1921. Deaths from puerperal peritonitis are not included.

Nephritis, Bright's Disease.—Successive increases in the deaths under this heading have occurred in each of the last four years, the total for 1921 being 377, as against 271 in 1917. Acute nephritis caused 47 of the deaths in 1921.

Cystitis.—Eighteen males and only 5 females are included in the total of 23 persons who died from cystitis in 1921. The total has shown a steady decrease in recent years.

Puerperal State.—The maternal death-rate, which is usually reckoned at per 1,000 live births, was much lower in 1921 than in 1920, being 5.08 as compared with 6.48. The numbers for the two years were 145 and 194 respectively. Deaths from puerperal septicæmia fell from 67 to 48, and those from puerperal hæmorrhage from 40 to 18. Increases are shown in the cases of puerperal albuminuria and convulsions (4) and puerperal embolism and thrombosis (9).

Malformations.—Half of the total deaths from malformations are due to malformation of the heart, or congenital heart-disease, these causing 82 deaths in 1921 out of a total of 159. Spina bifida was the cause in 21 cases, congenital stenosis of pylorus in 14, and hydrocephalus in 10.

Congenital Debility.—The decrease of 72 in the number of deaths of infants from congenital debility, icterus, and sclerema in 1921 as compared with 1920 is proportionately considerably greater than the fall in the number of births. Of the 191 infants who died from this cause in 1921, 116 were males and 75 females.

Premature Birth.—In this case the rate is best computed on the number of children born alive. On this basis the rate for 1921 (14.11 per 1,000) is only a little better than that for 1920 (14.57), though on the bare numbers a decided improvement is indicated. Male deaths in 1921 exceeded female by 33, and the male rate was 14.95 per 1,000 births, as compared with 13.22 in the case of female infants.

Senility.—Deaths from old age in 1921 are abnormally low, and the explanation does not lie in an excess in the previous year, the total for which was lower than the average of the three preceding years. Evidently conditions in 1921 were particularly favourable to old people. The figures for the two sexes (males 439, females 352) reflect the disparity in the respective numbers of males and females at the advanced ages.

Suicide.—Suicidal deaths show an increase, a state of affairs which is perhaps due to some extent to the unsatisfactory financial conditions ruling during most of the year. Of the 157 persons who committed suicide during the year, 30 were females. In 36 cases (all males) firearms were used, in 32 (including 4 females) hanging or strangulation was the means resorted to, in 25 (11 females) drowning, in 24 (2 females) cutting or piercing instruments, and in 21 (10 females) poisoning.

Other External Violence.—In addition to deaths from accident of all kinds, this heading covers homicide, the number of deaths from which is usually very small. The total for 1921 (15) is one less than in 1920. Drowning is the principal cause of accidental death, being responsible for the deaths of 109 males and 21 females in 1921. Motor accidents resulted fatally to 69 persons, and railway and tramway accidents to 50. Burns, scalds, and fires caused 56 deaths, falls 49, firearms 19, and injuries by animals 10. In 41 cases death was attributed to fracture of skull or other bones, without the cause of such fracture being indicated.

ORPHANS AND WIDOWS LEFT.

The total number of deaths of males in 1921 was 6,099, and of these 4,742 were over twenty years of age. Included in this latter total were 3,342 married men or widowers, of whom 365 left a widow but no issue, 2,046 both widow and issue, 727 no widow but issue, and 124 neither widow nor issue. In the remaining 80 cases no information was available as to whether a widow was left or not; in 43 of these 80 cases issue was left, in 19 cases no issue; and in 18 cases no indication was given as to whether there was any issue.

The total cases where a deceased man was shown to have left a widow were 2,411, and the total issue left by all married men and widowers whose deaths were registered during the year was 12,979, representing an average of 3.88, or, if only those cases where any issue was left be taken into account, 4.61.

Of the total issue left 6,510 were males and 6,469 females. Children under fifteen years of age included in the total numbered 1,923, representing 58 for every 100 married men or widowers who died. A further 1,140 were between the ages of fifteen and twenty-one, 9,847 were over twenty-one, and the ages of 69 were not stated.

A set of tables giving detailed statistics on the subject will be found on pages 62 to 86. These tables contain much valuable data for use in connection with pension, superannuation, or insurance schemes.

CASES IN PUBLIC HOSPITALS.

ADMISSIONS AND DISCHARGES.

The total admissions to public hospitals in New Zealand during 1921 numbered 45,107. There were 3,382 patients in hospital at the beginning of the year, the total cases dealt with during the year being thus 48,489, equal to 379 per 10,000 of mean population, including Maoris. The total number of persons treated is somewhat less than the number of cases, each admission being counted a separate case.

Of the 48,489 cases, 26,302 were discharged as recovered, in 13,912 cases the patient was discharged relieved, and in 1,925 cases as unrelieved. Deaths in hospital numbered 2,974, or 6.13 per cent. of cases dealt with. There are 72 public general hospitals, 4 fever or infectious-diseases hospitals, and 7 sanatoria for consumptives. Detailed figures for each hospital are given in the tables on pages 87 to 126, and a series of tables for all public hospital cases follows these.

The figures of admissions, discharges, and deaths for the last five years are as follows:—

PUBLIC HOSPITALS.—ADMISSIONS, DISCHARGES, AND DEATHS, 1917-21.

Year.	Admissions.	Discharges.			Deaths.	Total Discharges and Deaths.
		Recovered.	Relieved.	Unrelieved.		
1917 ..	38,882	24,493	10,124	1,321	2,793	38,731
1918 ..	46,226	31,253	9,409	1,366	4,468	46,496
1919 ..	42,917	26,321	11,385	1,906	2,864	42,476
1920 ..	45,995	28,230	12,418	2,241	3,399	46,288
1921 ..	45,107	26,302	13,912	1,925	2,974	45,113

In general the percentage of deaths is low. Even in 1918, when the figures were adversely affected by the admission of many thousands of influenza cases to public hospitals during the epidemic of that year, deaths represented only 9.61 per cent. of all cases dealt with. In 1921 the corresponding percentage was 6.13.

AGE OF PATIENTS.

The ages of patients discharged from or dying in public hospitals during 1920 and 1921 are as shown in the following summary:—

PUBLIC HOSPITALS.—AGES OF PATIENTS DISCHARGED OR DYING.

Ages of Patients, in Years.		1920.			1921.		
		Males.	Females.	Total.	Males.	Females.	Total.
Under 5	2,323	1,736	4,059	2,411	1,776	4,187
5 and under 10	2,512	2,233	4,745	2,900	2,517	5,417
10 .. 15	1,884	1,566	3,450	1,974	1,707	3,681
15 .. 25	4,739	4,249	8,988	4,367	4,036	8,403
25 .. 35	4,551	3,986	8,537	3,888	3,858	7,746

65 and over	2,385	842	3,227	2,217	782	2,999
Unspecified	52	59	111	52	40	92
Totals	26,627	19,661	46,288	25,365	19,548	44,913

DISEASES DEALT WITH.

The table following shows that Class I, "General diseases," is first on the list as regards both discharges and deaths. Diseases of the digestive system and diseases of the respiratory system come second and third respectively in point of numbers, but the death-rate in each case is low. External causes come next on the list, and here again the death-rate is very low, owing to the preponderance of simple fractures, cuts, bruises, &c.

Class.	Discharges.			Deaths.		Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.	Males.	Females.	Males.	Females.
I. General diseases	5,237	2,745	649	596	370	5,339	4,258
II. Diseases of the nervous system and of the organs of special sense	849	1,469	373	185	122	1,823	1,175
III. Diseases of the circulatory system	637	849	56	483	97	1,292	630
IV. Diseases of the respiratory system	4,414	1,551	98	222	98	3,623	2,760
V. Diseases of the digestive system	5,668	1,838	165	158	110	4,219	3,720
VI. Diseases of the genito-urinary system and annexa	1,860	1,209	173	155	78	1,041	2,434
VII. Puerperal condition	1,651	272	38	..	65	..	2,026
VIII. Diseases of the skin and of the cellular tissue	1,314	639	30	27	14	1,319	795
IX. Diseases of the organs of locomotion	737	767	65	19	9	1,122	475
X. Malformations	219	168	36	10	7	367	73
XI. Diseases of early infancy	29	24	6	18	30	50	57
XII. Old age (senile debility, &c.)	13	58	50	64	24	150	59
XIII. External causes	3,450	1,903	111	160	39	4,772	951
XIV. Ill-defined causes	224	160	75	12	2	248	225
Totals, 1921	26,302	13,912	1,925	1,909	1,065	25,365	19,548
Totals, 1920	28,230	12,418	2,241	2,177	1,222	26,627	19,661
Totals, 1919	26,321	11,385	1,906	1,884	980	26,164	16,312
Totals, 1918	31,253	9,409	1,366	2,955	1,513	27,119	19,377
Totals, 1917	24,493	10,124	1,321	1,812	981	22,239	16,492

More detailed information concerning certain of the principal diseases and groups of diseases is given in the following pages.

Epidemic General Diseases.—The first class of diseases in the international classification is the "general diseases," the first nineteen orders of which cover epidemic diseases. The principal epidemic general diseases dealt with in public hospitals are scarlet fever and diphtheria. There are four special hospitals for the treatment of these and similar infectious diseases, all situated in the South Island. Several hospitals have fever wings attached.

A summary of the epidemic general diseases dealt with in public hospitals during 1921 is given.

Disease.	Discharges.			Deaths.		Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.	Males.	Females.	Males.	Females.
Typhoid fever	200	12	3	19	8	131	111
Malaria	2	17	19	..
Leprosy	2	2	..
Measles	299	43	..	5	5	174	178
Scarlet fever	1,016	75	13	5	8	399	718
Whooping-cough	49	17	..	3	2	39	32
Diphtheria	1,500	115	31	36	40	762	960
Croup	11	4	..	1	..	12	4
Influenza	410	65	..	24	9	333	175
Dysentery	12	9	1	1	..	21	2
Erysipelas	97	17	..	2	1	50	67
Chicken-pox	31	7	1	15	24
Mumps	39	9	23	25
German measles	34	1	5	30
Totals	3,700	391	51	96	73	1,985	2,326

The rate of mortality of this group is normally very low, between 2 and 3 per cent. In 1921 the mortality-rate was 3.92 per cent., a considerable decrease as compared with the previous year's figure, due principally to the marked falling-off in the number of influenza cases treated in hospital.

Tuberculosis.—Tuberculosis occupies eight orders in the classification of disease, but is usually divided into two groups—viz., pulmonary tuberculosis and other forms of tuberculosis. Pulmonary tuberculosis, with which is included tuberculosis (undefined) and acute miliary tuberculosis, comprises 60 per cent. of the total of 1,841 cases of tubercular diseases, and 67 per cent. of the deaths.

Cancer.—The total number of deaths in public hospitals in 1921 where cancer was assigned as the cause was 275 (males 184, females 91). In addition 133 patients treated for cancer were discharged as recovered, 273 as relieved, and 194 as unrelieved. Very few of the recoveries were in cases of internal cancer, and but a small proportion of the deaths in cases of surface cancer. It is noticeable that with but few exceptions cancer of the mouth and its annexa was confined to males.

Of the 275 patients who died in hospital from cancer during 1921, 150, or 55 per cent., had been in hospital less than one month, and of these 33 died within one week of admission.

Other General Diseases.—The principal of the remaining diseases are as follows :—

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Non-puerperal septicæmia	302	173	2	11	367	121
Tetanus	5	1	..	10	11	5
Non-malignant tumours	132	54	18	4	131	77
Acute rheumatism	280	171	3	13	299	168
Chronic rheumatism and gout* ..	24	99	23	9	103	52
Diabetes	10	81	17	53	63	98
Exophthalmic goitre	21	61	8	12	22	80
Leucæmia	1	7	11	14	27	6
Anæmia and chlorosis	14	45	5	28	36	56
Alcoholism	175	128	14	19	302	34

Diabetes, exophthalmic goitre, leucæmia, and pernicious anæmia are usually fatal. Only one recovery is recorded in the case of pernicious anæmia, the remaining cases mentioned being due to other forms of anæmia. Twenty of the 28 deaths from anæmia are due to the pernicious type of the disease.

Diseases of the Nervous System.—The 1921 figures for diseases of the nervous system, following the international classification are as follows :—

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Encephalitis	3	3
Encephalitis lethargica	1	9	6	4
Abscess of brain	5	3	2
Meningitis	21	7	3	64	64	31
Locomotor ataxia	1	16	24	5	44	2
Other diseases of the spinal cord ..	65	188	41	32	200	126
Apoplexy, cerebral hæmorrhage ..	14	41	6	118	111	68
Softening of the brain	1	1	1	2	1
Paralysis without specified cause ..	16	65	20	34	85	50
General paralysis of the insane ..	1	5	2	1	7	2
Other forms of mental alienation ..	16	31	80	3	57	73
Epilepsy	22	92	32	2	118	30
Convulsions	6	4	..	1	3	8
Convulsions of infants	20	11	1	3	21	14
Chorea	14	25	4	..	15	28
Neuralgia, neuritis	131	167	26	4	181	147
Other nervous diseases	113	263	76	21	258	215
Totals	444	916	316	303	1,175	804

This class shows a fairly high death-rate over the whole group, the rate, however, being greatly reduced by the inclusion of such minor complaints as neuralgia and neurasthenia, which represent a fair proportion of the total cases dealt with. Among the discharges it is noticed that the number in cases returned as recovered is considerably less than those classified as relieved.

The large percentage of mental cases shown as unrelieved is due to the inclusion of a number of such cases being admitted to hospital for observation. It is not usual for mental patients to be treated in hospital for any length of time. Many mental patients are transferred from the public general hospitals to the mental hospitals.

Neurasthenia was the complaint in 303 of the 473 cases shown above for "other nervous diseases," this number including a large proportion of returned soldiers, but the total number of these cases is rapidly decreasing. Cerebral tumours accounted for 10 of the 21 deaths.

The diseases included under "Other diseases of the spinal cord" are as follows :—

Disease.	No. of Cases.	Disease.	No. of Cases.
Infantile paralysis	231	Acute ascending paralysis	1
Progressive muscular atrophy	19	Polioencephalitis	1
Lateral sclerosis	20	Myeloencephalitis	1
Disseminated sclerosis	20	Springomyelia	1
Friedrick's ataxia	1	Hæmatomyelia	1
Myelitis	15	Tumours of spine	2
Paralysis agitans	12		
Bulbar paralysis	1	Total	326

During the year 1921 there were 231 cases of infantile paralysis, a figure materially larger than that of the previous year, when only 58 cases in hospital were recorded. This is by far the largest number in any one year since the mild outbreak in the year 1916.

The total number of deaths ascribed to "other diseases of the spinal cord" was 32. Nine of these were due to infantile paralysis, 7 to myelitis, and 6 to paralysis agitans.

Diseases of the Eyes.—Eye troubles were responsible for admission to hospital of no fewer than 706 of the cases discharged from hospital during 1921. There were only two deaths from these causes. A summary of the various diseases of the eyes dealt with may be of interest.

Disease.	Recovered.		Relieved.		Unrelieved.		Deaths.		Total.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Foreign body in eye ..	10	..	11	..	2	23	..
Strabismus ..	8	5	8	9	..	2	16	16
Keratitis ..	2	3	7	5	1	10	8
Glaucoma ..	2	3	13	18	..	1	15	22
Iritis ..	15	7	31	8	3	49	15
Ulcers of eye ..	35	12	42	11	..	1	77	24
Cataract ..	23	8	90	42	19	2	132	52
Conjunctivitis ..	27	17	20	3	..	1	..	1	47	22
Abscess, tumour of eye ..	10	7	6	4	3	19	11
Dacryocystitis ..	3	4	2	8	1	6	12
Other diseases (including undefined)	30	17	39	29	8	6	..	1	77	53
Totals ..	165	83	269	137	37	13	..	2	471	235

Injuries to the eyes, other than those due to the presence of some foreign body, are included in the "accident" class. There were 135 cases of injury to the eyes in 1921.

Diseases of the Ears.—Diseases of the ears dealt with in hospital appear to be much fewer than eye-diseases. The total number in 1921 was 313, compared with 255 in 1920, 208 in 1919, 174 in 1918, and 192 in 1917. Of the 313 cases in 1921, 235 were treated for otitis media, 13 for otorrhœa, and 15 for tumours. Only 2 deaths were recorded in 1921, both due to otitis media.

Diseases of the Circulatory System.—Organic diseases of the heart are the most important in this class. During the year 1921 the returns show that there were 293 deaths due to heart-disease, as compared with 291 in 1920, 257 in 1919, 285 in 1918, and 257 in 1917. A table showing the condition on discharge and the number of deaths from the various diseases of the circulatory system for 1921 is given below.

Disease.	Discharges.			Deaths.	Total.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Pericarditis ..	2	7	..	5	9	5
Acute endocarditis ..	17	42	2	41	56	46
Organic diseases of heart ..	57	473	27	293	613	237
Angina pectoris ..	1	11	..	5	13	4
Diseases of the arteries ..	2	24	6	16	35	13
Embolism	1	1	..
Thrombosis ..	13	8	3	11	19	16
Varicose veins ..	48	34	47	35
Varicose ulcers ..	100	69	3	..	101	71
Varicocele ..	27	4	2	..	33	..
Hæmorrhoids ..	118	35	4	..	110	47
Phlebitis ..	24	11	..	2	16	21
Other diseases of veins ..	5	3	3	5
Adenitis ..	70	36	2	1	78	31
Abscess of groin ..	37	11	..	1	31	18
Abscess of axilla ..	28	25	36	17
Other diseases of lymphatic system ..	65	23	2	1	55	36
Hæmorrhage ..	5	2	..	1	5	3
Other diseases of circulatory system ..	18	30	4	2	31	23
Totals ..	637	849	56	380	1,293	630

Diseases of the circulatory system do not occupy a very prominent position in the statistics of hospital cases. Evidently, in a high proportion of the large number of deaths registered in which heart-disease is assigned as the cause, the general state of health has not been such as to cause admission to hospital.

Tonsils and Adenoids.—In the classification of diseases adenoids rank as a disease of the respiratory system, while treatment of the tonsils is included under the digestive system. As, however, many children are admitted to hospital for the removal of tonsils and adenoids at the same time, it is well to discuss these two complaints together.

During 1921 adenoids alone was the cause shown in 250 cases, tonsils alone in 909 cases, while in 2,749 cases the treatment was for both tonsils and adenoids. Four deaths were recorded. The medical inspection of school-children is responsible for the admission of a large proportion of these cases to public hospitals.

Bronchitis and Pneumonia.—Bronchitis, broncho-pneumonia, and pneumonia represent a big proportion of the non-tuberculous diseases of the respiratory system. The mortality-rate of these four diseases shows a fairly large decrease when compared with the previous year. Whereas the rate rose in 1920 to 17 per cent. of the total cases treated, it fell in 1921 to 13 per cent., there being a general decrease, but more so in the case of pneumonia. The figures for 1921 are,—

Disease.	Discharges.			Deaths.	Totals.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Acute bronchitis	127	45	..	12	114	70
Chronic bronchitis	244	242	11	37	386	148
Broncho-pneumonia	238	39	4	72	204	149
Pneumonia	781	62	6	146	678	317
Totals	1,390	388	21	267	1,382	684

Other Respiratory Diseases.—Of the 137 cases of goitre discharged from or dying in hospital during the year 1921, 120 were females, the figures for the previous four years being 119, 126, 124, and 85 respectively.

Diseases of the respiratory system, not already enumerated, include,—

Disease.	Discharges.	Deaths.	Disease.	Discharges.	Deaths.
Diseases of nasal fossæ* ..	338	..	Hydatid of lung	18	2
Diseases of larynx	82	3	Hæmoptysis	15	..
Goitre	133	4	Pleurodynia	10	..
Other diseases of thyroid ..	54	4	Pneumoconiosis	3	..
Pleurisy	352	6	Other diseases	16	14
Empyema	87	9			
Pulmonary congestion	11	1	Totals	1,269	50
Asthma	150	7			

* Other than adenoids.

Diseases of the Stomach.—There were 816 discharges and 37 deaths from diseases of the stomach during the year 1921, the principal of which were—Ulcer of stomach, 203; gastritis, 425; and dyspepsia, 109.

Of the 37 deaths, gastric ulcer was fatal in 25 cases and gastritis in 5.

The figures of discharges and deaths of the principal diseases for 1921 are,—

Disease.	Discharges.	Deaths.	Disease.	Discharges.	Deaths.
Ulcer of stomach	178	25	Hæmatemesis	17	1
Gastritis	420	5	Other diseases	69	1
Dyspepsia	109	..			
Vomiting	12	2	Totals	805	37

Diseases of the œsophagus, numbering 28 cases, are not included.

Diarrhœa and Enteritis.—The total cases of diarrhœa and enteritis included in the returns for 1921 were 753, including 65 deaths. Forty of the deaths were of children under two years of age, as compared with 36 in 1920, 10 in 1919, 19 in 1918, and 34 in 1917.

Appendicitis.—Appendicitis ranks high among hospital cases, but the death-rate is exceedingly low. During 1921 only 51 deaths occurred out of a total of 2,750 cases dealt with, representing a percentage of 1·85. Of the discharges, 2,342 were returned as recoveries, 342 as relieved, and 15 as unrelieved.

Hernia, Intestinal Obstruction.—Hernia cases included in the returns for 1921 numbered 876, including 27 deaths. A table showing for the different varieties of hernia, intestinal obstruction, intussusception, and volvulus, the condition on discharge from hospital, and the number of deaths during the year 1921, is given :—

Disease.	Discharges.			Deaths.	Total.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Inguinal hernia	501	103	14	6	546	78
Ventral hernia	72	17	9	2	36	64
Umbilical hernia	24	7	1	..	12	20
Femoral hernia	19	6	..	4	10	19
Strangulated hernia	15	6	..	2	20	3
Hernia (undefined)	49	14	2	3	56	12
Intestinal obstruction	39	32	8	25	58	46
Intussusception	15	5	..	7	14	13
Volvulus	3	2	3	2
Totals	737	190	34	51	755	257

Diseases of the Liver.—Non-cancerous diseases of the liver were responsible for 29 deaths during the year 1921. Discharges and deaths of patients treated for liver-diseases numbered 483. Of the total, biliary calculi was highest with 218, of whom 178 were females, and cholecystitis, with 111, next highest.

The following is a brief summary of the principal diseases :—

Disease.	Discharges.			Deaths.	Total.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Acute yellow atrophy	1	..	1
Hydatid	23	20	2	..	23	22
Cirrhosis	1	20	2	6	22	7
Biliary calculi	127	79	3	9	40	178
Cholecystitis	61	45	2	3	37	74
Jaundice	34	7	2	3	20	26
Other diseases	12	12	2	7	23	10
Totals	258	183	13	29	165	318

Diseases of the Urinary System.—Diseases of the kidneys and other portions of the urinary system numbered 1,377; details are given in the following table :—

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.	
	Recovered.	Relieved.	Unrelieved.		Males.	Females.
Acute nephritis	55	45	8	22	72	58
Bright's disease	44	88	5	85	124	98
Uræmia	4	4	..	26	24	10
Albuminuria	4	4	3	..	7	4
Pyelitis	74	62	3	3	32	110
Hæmaturia	14	19	3	..	27	9
Movable kidney	14	8	2	..	4	20
Pyelonephritis	1	7	..	6	8	6
Perinephritic abscess	4	1	5	..
Hydronephrosis	3	1	2	1	3	4
Abscess of kidney	4	2	..	1	7	..
Other kidney-diseases	18	11	3	4	16	20
Renal colic	18	18	1	..	25	12
Renal stone	7	23	10	..	29	11
Stone in bladder or urethra	26	13	5	1	39	6
Retention of urine	23	25	2	5	47	8
Incontinence of urine	1	10	1	..	9	3
Cystitis	78	98	6	14	90	106
Cystocele	8	3	2	13
Other diseases of bladder	9	12	1	2	12	12
Stricture, &c., of urethra	49	69	11	8	109	28
Enlargement, &c., of prostate	54	51	11	34	150	..
Totals	512	574	79	212	839	538

Diseases of the Genital Organs.—Non-venereal diseases of the male genital organs numbered 199 during the year 1921; 148 were classed as having recovered, 45 as relieved, and 5 as unrelieved. There was only 1 death recorded during the year. The figures for the principal diseases included are :—

Disease.	No. of Cases.	Disease.	No. of Cases.
Hydrocele	69	Paraphimosis	10
Orchitis	29	Others	65
Circumcision	15		
Epididymitis	11	Total	199

Diseases of the female genital organs, other than cancer or those diseases shown to be venereal or puerperal, are an important group in hospital cases, though the death-rate is exceedingly low. The total cases passing through public hospitals in 1921 were 1,729, including only 18 deaths. The list follows.

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.
	Recovered.	Relieved.	Unrelieved.		
Uterine hæmorrhage	102	45	5	..	152
Uterine tumour	99	39	8	4	150
Metritis	18	1	19
Endometritis	108	45	3	1	157
Cervicitis	2	8	2	..	12
Endocervicitis	7	3	10
Erosion of cervix	3	4	3	..	10
Retroversion of uterus	179	76	17	2	274
Anteflexion of uterus	3	9	12
Retroflexion of uterus	15	3	2	..	20
Prolapse of uterus	132	69	14	4	219

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.
	Recovered.	Relieved.	Unrelieved.		
Parametritis	25	11	1	..	37
Dysmenorrhœa	44	23	7	..	74
Leucorrhœa	10	7	2	..	19
Pelvic abscess	12	5	1	1	19
Other diseases of uterus	81	17	10	1	109
Ovarian cysts	91	34	4	3	132
Salpingitis	58	68	3	1	130
Pyosalpinx	15	21	1	..	37
Oophoritis	15	7	22
Vaginitis	4	17	21
Bartholin's abscess	7	4	1	..	12
Salpingo-oophoritis	9	3	12
Pyosalpingitis	6	2	8
Other diseases	40	20	2	..	62
Totals	1,085	540	86	18	1,729

The above figures do not include 167 cases of diseases of the female breast (mastitis 52, tumour, 26, abscess 88, and contraction of nipple 1).

Puerperal State.—A total of 2,026 cases come under the heading of puerperal. This number includes 690 cases of normal childbirth dealt with at public general hospitals, but does not cover maternity cases in St. Helens Hospitals.

There have been fairly substantial increases in the number of puerperal cases treated during the last five years. This increase can justly be put down to the huge advance that has taken place in the matter of providing maternity wards at the various public hospitals. Whereas in 1917 there were only 252 cases of normal labour, this figure gradually rose until in 1921 it reached the comparatively high figure of 690. Puerperal septicæmia also rose during the same period from 44 to 139, but the mortality-rate decreased by over 50 per cent. Accidents of pregnancy accounted for the remainder of the increase. The totals given in 1921 for miscarriage do not include threatened miscarriage, 28, and incomplete miscarriage, 33; nor do those for abortion include threatened abortion, 30. These figures, together with 22 cases of hyperemesis and 18 cases of vomiting, are the principal diseases included in "other accidents of pregnancy."

Disease.	Discharges.			Deaths.	Total Discharges and Deaths.
	Recovered.	Relieved.	Unrelieved.		
Miscarriage	233	76	..	1	310
Abortion	101	5	106
Incomplete abortion	190	29	..	1	220
Ectopic gestation	59	14	..	3	76
Other accidents of pregnancy	128	70	21	3	222
Normal labour	673	10	7	..	690
Puerperal hæmorrhage	15	6	..	5	26
Laceration, &c., perinæum	34	9	3	..	46
Laceration, &c., of cervix	36	6	3	..	45
Other accidents of labour	32	10	..	2	44
Puerperal septicæmia	95	10	1	33	139
Puerperal albuminuria, convulsions	42	16	2	14	74
Puerperal phlebitis and phlegmasia	7	4	..	3	14
Puerperal mania	5	7	1	..	13
Puerperal gland of breast	1	1
Totals	1,651	272	38	65	2,026

Skin-diseases.—The figures for the principal diseases of the skin and annexe were as follows :—

Disease.	Number of Cases.	Disease.	Number of Cases.
Gangrene	36	Impetigo	48
Carbuncle	91	Ingrown nails	45
Furuncle	45	Herpes	27
Boils	24	Psoriasis	17
Abscess	478	Seborrhœa	20
Cellulitis	247	Urticaria	17
Whitlow	79	Ringworm	11
Ulcers	228	Pruritis	7
Eczema	129	Onychia	6
Scabies	96	Pemphigus	2
Dermatitis	90	Other diseases	179
Sinus	62		
Erythema	50	Totals	2,024

Deaths from these diseases during 1921 numbered 41, including 18 ascribed to gangrene, 13 to cellulitis, and 3 to acute abscesses.

Diseases of Bones, &c.—Non-tuberculous diseases of the bones and of the organs of locomotion numbered 1,597, including 28 deaths. Nineteen of the deaths were due to osteomyelitis. The principal diseases in this class, following the order of the classification, were,—

Disease.	Number of Cases.	Disease.	Number of Cases.
Osteomyelitis	219	Amputations	26
Mastoiditis	81	Bursitis	77
Periostitis	67	Lumbago	66
Necrosis	57	Myalgia	60
Sinusitis	51	Talipes	77
Osteitis	13	Tenosynovitis	16
Exostosis	10	Ganglion	14
Other diseases of bones	233	Bunion	14
Synovitis	129	Other diseases of organs of locomotion	176
Arthritis	105		
Ankylosis	16		
Other diseases of joints	79	Totals	1,597

Malformations.—The number of cases attributed to congenital malformations during the year 1921 was 440, and the number of deaths 17. Of the 423 discharges, 219 were shown as having recovered, 168 as having been relieved, and 36 as having shown no improvement.

A table is given showing the number of discharges and of deaths for each of the principal malformations.

Malformation.	Discharges.	Deaths.	Malformation.	Discharges.	Deaths.
Phimosis	268	1	Congenital dislocation	20	..
Cleft palate	26	..	Talipes	22	..
Nervus	19	..	Congenital heart-disease	6	3
Hare lip	15	2	Other malformations	35	6
Hydrocephalus	8	..			
Spina bifida	4	5	Totals	423	17

Early Infancy.—Forty-eight deaths are recorded as having been due to diseases of early infancy, which is 2 more than in the previous year. The chief items in this class are marasmus (23 deaths), premature birth (10 deaths), and congenital debility (7 deaths). The total discharges and deaths amounted to only 107; thus the deaths amounted to the very high percentage of 44·85 to the total cases treated, as against 38·33 in 1920, 47·44 in 1919, 44·34 in 1918, and 36·75 in 1917.

Old Age.—Hospital returns show a total of 64 male deaths and 24 female deaths from old age during 1921. These totals include the returns of three hospitals which are also old people's homes.

External Causes.—The principal headings included in this class in hospital cases are fractures and injuries in regard to which no specified cause is shown. In death-registrations the cause of death is asked for, and in cases of deaths resulting from fractures and other injuries the actual cause is obtained, and the death classified under one or other of the thirty definite headings provided. The Medical Superintendents are, however, concerned not with causes but with natures of injuries, and the returns in the great majority of cases are classed under the headings "fractures" and "injuries," which in death statistics would be regarded as somewhat indefinite, but which in morbidity statistics are invaluable on account of the fact that the part of the body affected is given in most of the cases. Fractures and injuries are dealt with in detail below.

Three suicidal deaths in hospital were returned in 1921, and 17 of the patients discharged were admitted for treatment for self-inflicted injuries.

Accidental poisoning, including cases not shown to be suicidal, was returned in 82 cases, including 16 of ptomaine poisoning; 269 cases of burns, 104 of accidental shooting, 1 of injury by fall, and 5 of injuries by crushing are also shown; 8 persons were treated for effects of heat, 6 for effects of excessive cold, 1 for starvation, 8 for suffocation, 2 for electrocution, 5 for injuries inflicted by animals, and 14 for effects of immersion in water. The total deaths in hospitals during the year from "External Causes" were 199 out of a total of 5,723 cases.

Fractures, Dislocations, &c.—The part of the body affected in the 2,255 cases of fractures referred to above is shown in the next table:—

Fractures.	Cases.	Fractures.	Cases.	Fractures.	Cases.
Fracture of skull	122	Fractured wrist	5	Fracture of patella	25
Fracture of nose	11	Sprained wrist	6	Dislocation of patella	3
Fractured malar	15	Colles fracture	66	Fracture of tibia	238
Fracture of jaw	60	Dislocation of metacarpals	2	Fracture of fibula	79
Dislocation of jaw	3	Fracture of metacarpals	14	Fracture of tibia and fibula	157
Fracture of maxillary	4	Dislocation of fingers	46	Pott's fracture	67
Fracture of clavicle	110	Fracture of sternum	1	Fracture of ankle	14
Dislocation of shoulder	73	Fracture of spine	22	Dislocation of ankle	6
Sprain of shoulder	2	Fracture of ribs	93	Sprained ankle	87
Fracture of olecranon	14	Fracture of pelvis	15	Fracture of heel	8
Fracture of scapula	10	Fracture of ilium	4	Fracture of tarsus	2
Dislocation of acromion	11	Sprain of spine	5	Fracture of metatarsals	16
Fracture of humerus	212	Fracture of hip	4	Fractured toe	14
Dislocation of elbow	56	Dislocation of hip	20	Sprained tarsus	5
Sprained elbow	3	Fracture of leg	40	Fracture of scaphoid	5
Fracture of forearm	20	Fracture of femur	108	Fracture of sesamoid	1
Fracture of radius	73	Sprain of leg	1	Fracture (undefined)	12
Fracture of ulna	17	Dislocation of knee	5		
Fracture of radius and ulna	73	Sprained knee	10		
Fracture of arm	15	Dislocation of semi-lunar cartilage	42		
Dislocation of wrist	3				
				Total	2,255

The total shown includes 89 deaths, 39 of which were due to fracture of the skull.

Miscellaneous Injuries.—The heading “Other External Violence,” which covers a large list of miscellaneous and undefined injuries, accounted for a total of 2,941 cases, including 55 deaths, 18 of which were due to injuries to the head or brain. The total number of cases was swelled slightly by the inclusion of 176 returned soldiers treated for wounds received in battle.

Benevolent and Orphan Asylums.—Fifty-five institutions classed under the heading of benevolent and orphan asylums furnished returns to the Census and Statistics Office for the year 1921. These institutions, which are conducted by Hospital Boards, religious bodies, and other public or semi-public organizations, are alike in that they provide free accommodation on a benevolent or charitable basis, but differ largely in the classes of persons to whom they afford assistance. The generic name covers old people's homes, maternity and refuge homes for unfortunate women and girls, orphanages, homes for the infirm or afflicted, “prison gate” homes, and an institute for the blind. Some of the orphanages deal with cases similar to those dealt with by the industrial schools under the control of the Education Department, and a few of the women's institutions receive offenders committed to them by the Court.

The 55 institutions which furnish returns for 1921 had a total of 6,411 inmates during the year, of whom 3,455 were males and 2,956 females. They commenced the year with a total of 3,494, and had 3,584 at the end of the year. Admissions during the year totalled 2,608, and in addition 309 infants were born in the institutions. Discharges numbered 2,536, and deaths of inmates 291.

The ages of all inmates in the institutions at any time during the year were as follows :—

Age-group.					Males.	Females.	Total.
Under 5	437	473	910
5 and under 10	395	449	844
10 ..	15	327	478	805
15 ..	25	96	592	688
25 ..	35	113	215	328
35 ..	45	207	110	317
45 ..	55	249	93	342
55 ..	65	340	102	442
65 and over	1,286	428	1,714
Unspecified	5	16	21
Totals	3,455	2,956	6,411

It is interesting to note that females exceed males in all groups up to age 35, but that males are in the ascendancy thereafter, the excess increasing for successive age-groups until for ages 65 and over three inmates in every four are males. It would appear that the orphanages cater more for girls than for boys, thus affecting the relative totals for the first three groups. The next group is composed mainly of maternity cases, and the female excess in the group 25 to 35 is largely due to the inclusion of a considerable proportion of such cases. At ages 35 to 45 the figures for the Prison Gate Brigade Home at Addington are sufficient to give a substantial male excess. The inmates of this institution also go a long way towards accounting for the male excess in the next two groups, particularly group 45 to 55. Other Old People's Homes, however, also assist, more especially in the group 55 to 65, the institutions at Auckland (Costley Home), Napier (Parke Island Old People's Home), Wellington (Ohiro Home), and Dunedin (Otago Benevolent Institution) between them accounting for 155 of the male excess in this group. The Old People's Homes, several of which are for men only, have a great preponderance of males among their inmates, a position partly due to the fact that at the more advanced ages males considerably outnumber females in the general population, but probably more to the propensity in many men, especially in the early days, to adopt a roving or solitary life—at sea, on the goldfields, or elsewhere—with the result that, having no friends or near relatives to turn to in their old age, they are compelled to accept the shelter and comfort afforded by an Old People's Home.

INQUIRIES.

Any communication in regard to matter contained in this Report should be addressed to the Government Statistician, Wellington, New Zealand.

* Now united to form the Methodist Church of New Zealand.

† Thirty-six marriages of Maoris, both persons being of the Native aboriginal race, were solemnized, but are not included in the above table—28 before Registrars, 3 by Church of England ministers, 1 by Presbyterian minister, 1 by Methodist minister, and 3 by ministers of the Church of Jesus Christ of Latter-day Saints. In addition, returns were received of 212 marriages solemnized under the provisions of section 191 (1) (b) of the Native Land Act, 1909.

TABLE showing the Number of Deaths of Females registered during the Years 1872-1921, classified according to Age-groups.

Year.	Under 1 Year.				Total under 1 Year.	1 and under 2 Years.	2 and under 3 Years.	3 and under 4 Years.	4 and under 5 Years.	Total under 5 Years.	5 and under 10 Years.	10 and under 15 Years.	15 and under 20 Years.	20 and under 25 Years.	25 and under 30 Years.	30 and under 35 Years.	35 and under 40 Years.	40 and under 45 Years.	45 and under 50 Years.	50 and under 55 Years.	55 and under 60 Years.	60 and under 65 Years.	65 and under 70 Years.	70 and under 75 Years.	75 and under 80 Years.	80 Years and over.	Unspecified.	Total All Ages.
	Under 1 Year.																											
	Under 1 Month.	1 and under 3 Mths.	3 and under 6 Mths.	6 and under 12 Mths.

INDEX₂ OF MORTALITY, 1921.

INDEX of Mortality for New Zealand in 1921, according to the Decision of the Conference of Statisticians, calculated in Five Age-groups, taking the Population of Sweden in 1890 as a Standard.

Ages.	Estimated Mean Population, 1921.	Number of Deaths, 1921.	Death-rate per 1,000, 1921.	Percentage of Population of Sweden, 1890 (Standard).	Index of Mortality in New Zealand per 1,000.*
Under 1 year	28,567	1,366	47·82	2·55	1·22
1 and under 20 years	458,097	1,066	2·33	39·80	0·93
20 and under 40 years	428,807	1,424	3·32	26·96	0·89
40 and under 60 years	219,417	2,178	9·93	19·23	1·91
60 years and upwards	89,013	4,648	52·22	11·46	5·98
Totals	1,223,901	10,682	8·73	100·00	10·93

* The index is used for purposes of comparing the rate of mortality of one country with another. When the proportions of the living vary in regard to the different age-groups, the ordinary death-rate—which is calculated on the whole population *en bloc*—does not afford a true means of judging of the relative healthiness of the places compared. But by taking a population like that of Sweden, and applying the percentage at each age-group to the death-rates, a standard of health or index of mortality can be arrived at.

CAUSES OF DEATH, 1921.

TABLE showing, for either Sex, the Number and Percentage to the Total Deaths and the Proportion per 10,000 living of Deaths registered during the Year 1921, classified according to Causes.

Class.	Number of Deaths.			Proportion to Total Deaths.			Proportion per 10,000 living.
	M.	F.	Total.	M.	F.	Total.	
I. General Diseases	1,393	1,351	2,744	Per Cent.	Per Cent.	Per Cent.	22·42
